Baum
Dear Werner:

Greetings from down under!

I will be quite happy to see you use the figure(s) from my conjugal pairing note-- these do not, I hope, include the electron micrograph, which is technically not a good job at all. I would think the Giemsa stained prep. (is that figure 2?) would be the best bet.

Unfortunately, it would be a bit awkward for me to arrange getting you a print from this distance. I will attend to that as soon as possible when we return to Madison in November.

We will be in Melbourne in another week, where I will be doing some work on Burnet's institute. But I would be best addressed c/o Rubbo at the Bact. Dept., Melbourne Univ., Carlton N3, Vic., Australia.

Yours

Joshua Lederberg
